

Summary

VIBE CITY TOKEN [\$VICI] is a meme token project inspired by the timeless vibe of Miami Beach. It focuses on an iconic place whose identity extends far beyond geography, representing a cultural symbol of style, energy, and nostalgia. As such, it has already influenced many prominent films, series, and online games.

Drawing on the unmistakable imagery of endless summers, pastel skylines, palm-lined boulevards, neon lights and synthwave dreams, Vibe City captures the essence of a world where every moment feels larger than reality. Vibe City is not just a place: it is a lifestyle reimagined across generations and cultures.

[\$VICI] brings this vibe exclusively into the crypto universe. As the first 'memeingful' lifestyle token of its kind, it channels style, creativity, and energy into a digital community, creating a shared identity where imagination meets energy, memes meet aesthetics, and vibe style becomes a way of life.

[\$VICI] will launch with an exclusive online sale. With the focus on full fairness and transparency, sale activities will run on chain only, making allocations and transactions transparent. There will be a fixed total supply and locked liquidity.

Once launched, [\$VICI] will be publicly tradable. The project will run a marketing campaign, building a community across social media channels. A reserved token allocation will be released under the configured vesting schedule.

Background Information

In a world of constant seriousness and busyness, VIBE CITY TOKEN [\$VICI] invites you to slow down, turn up the synths, and enjoy the sunset. As the first 'memeingful' lifestyle token of its kind, it embraces a vibe powered by style, relaxation, creativity, and nostalgia. [\$VICI] exists to remind the world that sometimes, the most valuable things cannot be measured in tokens, but in a feeling of belonging.

[\$VICI] was born during a late evening in Miami Beach. Gathering at the oceanfront, the project team watched the sun melt into the horizon as pastel colors lit the sky. The air smelled of nostalgia, and the sound of distant synth music drifted from a nearby club. In that relaxing moment, surrounded by palm trees, neon lights, and the echoes of timeless glamour, the vision was born to capture this vibe forever. Now, the vision became reality because [\$VICI] comes to the crypto community.

Token Description

VIBE CITY TOKEN [\$VICI] is a Solana-based meme token. The exclusive online sale starts on May 19, 2026. The token will be publicly tradable after launch. The project will run a dedicated marketing campaign.

Functional Features

- Fixed total supply of 10,000,000 tokens.
- On-chain launch flow with public trading after launch.
- Post-launch trading via the official Jupiter swap route.
- Exclusive online sale with a transparent, deterministic pricing curve.
- Community section on the website, with access and feature unlocking
- Locked liquidity pool and vesting for the reserved token allocation.

Technical Features

- Solana Token-2022 token standard with 9 token decimals.
- Meteora Dynamic Bonding Curve (DBC) for launch.
- Migration to Meteora DAMM v2 after the migration threshold is reached.

Roadmap

- **Phase A: Preparation**

Inception of the project. Token is conceptualized, sale process designed. Supply, vesting and price scheme are fixed, tokenomics are finalized. Set up of the website and social media, preparing the crypto community for the ultimate flow of vibes.

- **Phase B: Sale**

Exclusive on-chain token sale goes live with immediate token distribution while the liquidity pool gets funded. The marketing campaign starts, and the online community starts to open across social media.

- **Phase C: Migration**

After the sale, the token migrates into the liquidity pool at the predefined threshold. Liquidity is locked, reserve tokens enter vesting, and marketing continues as the token's presence grows.

- **Phase D: Pure Vibes**

As the online community continues to grow, so does interest in Vibe City and its defining token. A shared identity emerges, while the token's significance within the crypto universe continues to expand.

Tokenomics

There is a limited total supply of 10,000,000 tokens. To purposefully manage demand and supply during the exclusive online sale, there is a transparent, deterministic price curve: rising from 0.0012 SOL per token at the beginning of the sale to 0.0015 SOL per token at the end of the sale and point of migration.

After migration, 30% of the tokens will get transferred into the liquidity pool. An additional 30% of the total supply is allocated to locked vesting. Of this vested allocation, 1,000,000 tokens unlock after the 5-day cliff, and the remaining 2,000,000 tokens unlock over 12 months in 12 vesting periods.

Distribution of the Token

- **4,000,000:** Exclusive sale and leftover handling
- **3,000,000:** Liquidity pool
- **3,000,000:** Locked & vested reserve

This allocation includes the 10-token leftover retained in the DBC for rounding and precision handling.

Tokenomics Details

Property	Purpose	Unit	Value
Total token supply	DBC Curve	\$VICI	10,000,000
Initial DBC market cap	DBC Curve	SOL	12,000
Target migration DBC market cap	DBC Curve	SOL	15,000
Percentage supply on migration	DBC Curve	%	30
Start price	DBC Curve	SOL	0.001200000
End price	DBC Curve	SOL	0.001500000
